SUMMARY

Computer Science diploma graduate (2023–2026) from Acharya Institute of Technology, looking for a QA or Software Tester intern or fresher role. I have tested and shipped two full-stack web applications: FreshCart, a Java/Spring Boot grocery store covered by 36 automated JUnit 5 tests that run on every push, and PortfolioHub, a React and Firebase portfolio builder where I tested the live app and logged and fixed 14 bugs. I look for edge cases, security gaps and broken user flows before a release goes out.

PROJECTS

FreshCart – Grocery Web Application | Java 17, Spring Boot 3, Spring Data JPA, MySQL/H2, JavaScript, JUnit 5, Docker

- Wrote 36 JUnit 5 / MockMvc tests, run automatically by GitHub Actions on every push so regressions are caught before deploy; deployed on Render with Docker.
- Tested and handled real e-commerce edge cases: atomic stock reservation so two buyers can't get the last item, duplicate-order protection on double click, price-change detection and server-side bill calculation.
- Checked security behaviour: salted password hashing, account lock after 5 failed logins, and owner checks on every order API (403 for other users' orders).
- Built a full-stack grocery store: product catalog and search, cart, checkout with coupons and PIN-code check, order history and an admin panel for orders, stock, expiry dates and coupons.
  Live: grocery-web-app-fb3j.onrender.com | Code: github.com/suryaprasanth740/grocery-web-app

PortfolioHub – Developer Portfolio Builder | React 18, Firebase (Auth, Firestore, Storage, Hosting), Tailwind CSS, Vite

- QA-tested the live app, logged 14 bugs and fixed them, including Firestore security rules so draft profiles and messages stay private, publish validation and login usability.
- Built a web app where developers sign up, add their profile, skills and projects, pick one of six themes and publish to a shareable link.
- Features: Markdown blog with code highlighting, live GitHub star counts, contact inbox, visitor analytics and one-click PDF export.

EDUCATION

Diploma in Computer Science — Acharya Institute of Technology, Bengaluru 2023 – 2026 | CGPA 7.2

SKILLS

Testing: Manual and exploratory testing, test case design, bug logging, JUnit 5, MockMvc, API testing, CI with GitHub Actions
Languages: Java, JavaScript, HTML, CSS, SQL, Python (basics)
Frameworks: Spring Boot, Spring Data JPA, React
Databases: MySQL, H2, Firebase Firestore
Tools: Git, GitHub Actions, Maven, Docker, VS Code
Concepts: Edge-case analysis, security and access-rule checks, REST APIs, web development, data structures basics

ADDITIONAL INFORMATION

- Open to QA / Software Testing internship and fresher full-time roles; available to join immediately.
- Currently strengthening full-stack skills through a full-stack development course.
